P.O. Box 519
Pekin, IL 61554
ATTENTION: Bernard J. Rosenberg

Dear Mr. Rosenberg:

During our telephone conversation on 2-8-83, you requested that I submit in writing to you a summary of the work American Fly Ash Company proposes to perform on your property north of the Mahoney landfill site.

The items are as follows:

- 1) Remove the boiler slag that washed onto your property in 1982. This would consist of scraping up this material into a stockpile and loading it into dump trucks with an endloader. Adequate topsoil would be imported to replace topsoil which is inadvertently removed along with the slag during this operation.
- 2) Sealing and capping the two existing monitoring wells located on your property. This would consist of digging down three to four feet around each monitoring well, cutting off the pipe at that point, filling the remaining hole with sand, and backfilling the hole with the existing soils as well as imported topsoil to bring the area back to a condition which existed before the monitoring wells were installed.
- 3) Excavate a test opening along the berm at the interface between your property and Mahoney's landfill. This would consist of an endloader excavating the toe of the slope which encroaches on

your property to the south towards Mahoney's property until the pozzolanic liner is located and marked relative to the existing property line. The endloader would then place the excavated dirt back into the test opening.

It is my understanding that Commonwealth Edison's Real Estate Department has contacted you about items 2 and 3 and they have in turn requested American Fly Ash Company perform this work. American Fly Ash felt that at the same time we could clean up the slag mentioned in item 1.

If you have any questions about this proposal please contact me at (815)838-1393 or (312)242-3020. Please send me written approval so that this work can be started and completed in a timely fashion. My business card with my address is enclosed.

Sincerely,

Alan R. Dunbar
